

# TacFuels® - Tactical Fueling Solutions

## Automated Measurement Kits for Rapid Deployment

*Fuel is stored and deployed from fuel supply points to support expeditionary operations in harsh and demanding tactical environments. Each supply point is comprised of multiple collapsible storage tanks (CST) that need to be measured, monitored and accounted for on a daily basis.*

### **A Critical Component for Effective Inventory Management**

Varec's TacFuels kits are designed to meet harsh environmental requirements and they are packaged to mirror fuel supply point deployment strategy. Pre-configured kits contain gauges, data capture units, flow meters and all associated hardware, cabling and instructions to get your site up and running quickly. Kits with 4, 6 or 8 gauges can be combined to support expanded fuel supply points. For example, single leg combinations can support up to 28 CSTs with multiple parallels exceeding 100 CSTs.

Major Assemblies	4 Tank Kit	6 Tank Kit	8 Tank Kit
Tactical Fuel Gauge (TFG)	4	6	8
Tactical Data Unit (TDU)	1	2	2
Tactical Mobile Computer (TMC)	1	1	1
Tactical Interface Converter (TIC)	1	1	1
Tactical Flow Meter (TFM)	1	1	1
Industrial Shipping and Storage Cases	2	3	4
